

Ronny García Lorenzo

Welcome to my CV

Updated 17 Jul 2020

La Habana. Cuba

about me

28 years old / Freelance

Software engineer graduated in 2014. I have professional experience in cybersecurity, web application development, and basic command of the English language. I started to work after graduation, on a cybersecurity department, as specialist in the area. For the next 3 years, manage a team attendant Cuban cyberspace, using technologies such as IDS/IPS (Suricata, Vipnet, Snort), and develop tools for better work.

I started to work in 2018 as developer specialist, for next 2 years in a state company, where I took several courses such as advanced php using Symfony Framework and PL/SQL develop. Also, some courses by myself, from Udemy and Codewithmosh services, like JavaScript Basics for Beginners, The Complete Web Developer in 2019 Zero to Mastery, “Desarrollo web en PHP con Laravel 5.6”, VueJS y MariaDB MySQL, and others.

With the aim of better knowledge, I started master studies in cryptographic applications, finishing them in 2017. In the same year, obtained several certifications like Vipnet Hardware and Software Administration (InfoTech, Russian Enterprise), Webs Security Certification, sponsored by the Ministry of Commerce and organized by the Wuhan's city Post and Telecom Research Institute (Hubei province, Republic of China).

I consider myself a person with integration capabilities with enthusiastic character, with capabilities to set priorities, and make important decisions. I'm an independent and organized worker, with good aptness for time management, willing to venture into the business environment, but above all eager to continue learning and being an entrepreneur.

skills

And Technologies

developer knowledge

Work with technologies such as php, JavaScript, html, CSS, supported by the use of frameworks like Symfony, Laravel, CodeIgniter, for php, Nuxt, Vue, extend and react for JavaScript and toolkits design such as bootstrap, CSS grid, CSS flexbox.

Operating System

Work with different operating systems like windows and Linux. Specifically, at work with ubuntu, Kubuntu and Kali Linux.

Databases

Work with technologies such as MySQL, PostgreSQL, MariaDB, mongo DB, using managers like phpMyAdmin, PgAdmin, Navicat.

Version Control

Work with technologies for controlling branches and version controls such as git.

Services

And Products

Symfony & Twig

Web applications, using the Symfony framework for the backend, and twig for the frontend. Using the EasyAdmin administration bundle, a powerful tool that will allow you to generate stylized CRUDS under Bootstrap4 standards, as well as Fos User Bundle for user administration.

Laravel & Vue

Web applications, using the Laravel framework for the backend, and vue.js for the frontend. You can use administration templates such as AdminLTE, Stisla or another that provides a stylized view and pleasing for any user, using all the potential of a framework such as Vue, you can achieve great designs.

Nuxt & Node Express

Web applications, using the Node Express JavaScript framework for the backend, and Nuxt.js for the frontend. Nuxt, the evolution of Vue, allows all its virtues, as well as the implementation of animations and designs under Bootstrap standards, with template engines such as CoreUI, AdminLTE or other.

CodeIgniter

Web application, using php CodeIgniter framework, with a simpler and lighter connotation. It can be integrated with the latest versions of Bootstrap, and use template engines for administration such as CoreUI, AdminLTE or other.
